No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 86,

```
in nerve guidance which heve been isolated from Drosophila sp.,
C. elegans, human and murine samples. The products of the invention can
be used to raise anti-Robo antibodies, which can be used to modulate cell
function or morphology. The Robo polynucleotides and fragments are useful
as probes and primers and for production of the Robo polypeptides. The
probes and primers are also useful in screening assays.
                                                                                                                                                                                                                                         85 SGSLFFLR-----IVHGRKSRPDEGVYVCVARNYLGEAVSHNASLEVAILRDDFRQNPS 138

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for elicting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to processed class I or class II MRC-binding polypeptide. The polypeptides and polymulectides are particularly useful for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This is the amino acid sequence of a novel human protein designated TB5, and also referred to as FMHB-6D4 and FMHB-SD4. TB5 CDNA (see AAV69278) was identified in a human foetal brain CDNA library using a screen designed to identify genes encoding proteins having a functional signal sequence. TB5 nucleic acids and polypeptides of the invention are useful as modulating agents in regulating a variety of cellular processes. They can be used for identifying compounds which bind to or modulate the activity of the polypeptides (claimed). They can also be used in screening assays, detection assays (e.g. chromosomal mapping, tissue typing, forensic biology), monitoring clinical trials, and pharmacogenomics), and methods of treatment (e.g. therapeutic and prophylactic) e.g. for neurological

                                                                                                                                                                                          The present sequence representing human TANGO 330 form 1 is isolated from cDNA 10ne jthAa060g22 from a human adrenal gland cDNA library. TANGO 330 is 1 of 4 novel human transmembrane proteins which also includes TANGO 315 (A 4 novel human transmembrane proteins which also includes TANGO 315 (AAU00498-AAU00499). TANGO 437 (AAU00502) and TANGO 480 (AAU00503). The nucleic acids encoding these proteins are madulating agents in regulating a variety of cellular processes and can be used to express the proteins in a host cell in gene therapy applications. Antisense nucleic acid molecules and containing the TANGO nucleic acids are also described. Diagnostic assays can be used to detect genetic alterations in the TANGO nucleic acids are also described. Containing the TANGO nucleic acids are used diagnostically to mucleic acids and to identify compounds that bind to or modulate activity of the TANGO proteins. Anti-TANGO attibodies are used diagnostically to monitor protein levels in tissue as a clinical testing procedure. TANGO 330 shows homology to human Roundabout. TANGO 330 nucleic acids and proteins may be used to diagnose, treat and monitor disorders of the and proteins may be used to cliagnose, treat and monitor disorders of the can also be used to treat cell proliferative disorders (e.g. cancer), and neurological disorders e.g. Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                272

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                   The present sequence representing human TANGO 330 form 2 is isolated from cDNA clone Jthxe181e12 from a human astrocyte cDNA isolated from cDNA clone Jthxe181e12 from a human astrocyte cDNA library. TANGO 330 is 1 of 4 movel human transmembrane proteins which also includes TANGO 315 (AAU00499-AAU00499), TANGO 437 (AAU00502) cand TANGO 480 (AAU00503). The nucleic acids encoding these proteins care useful as modulating agents in regulating a variety of cellular processes and can be used to express the proteins in a host cell in gene therapy applications. Antiense nucleic acid molecules and companion of containing the TANGO nucleic acids are also described. Condesic acids and to identify compounds that bind to or modulate activity contein levels in tissue as a clinical testing procedure. TANGO proteins. Anti-TANGO antibodies are used diagnostically to monitor protein levels in tissue as a clinical testing procedure. TANGO 330 shows homology to human Roundabout. TANGO 330 uncleic acids and proteins may be used to diagnose, treat and monitor disorders of the adrenal cortex e.g. hypoadrenalism, hyperadrenalism, and neoplasia. They can also be used to treat cell proliferative disorders (e.g. cancer), can also be used to treat e.g. Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            143

The present invention relates to endothelial cell-specific molecule 4 (BCSM4), and the polynucleotide sequences encoding it. The BCSM4 proteins are useful for imaging vascular endothelium in the body of an individual, and for diagnosing and treating a proliferative disease or condition involving the vascular endothelium (preferably, neovasculature) such as cancer, psoriasis, diabetic retinopathy, the manufacture of diagnosit or prognostic agent for such conditions. The proteins are also useful for detecting endothelial damage or activation, detecting a tumour or tumour neovasculature, cardiac disease, or endometricals by detecting the amount of ECSM4 present in a sample. The polynucleotide sequences encoding ECSM4 are useful in gene therapy for treating a hypoxic condition such as cancer, cardiac disease, endometricals or atherosclerosis and in the manufacture of medicaments for treating the above disease. The sequences are useful in for modulating angiogenesis in an individual. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  119

The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides, for linking bioactive molecules activities of cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The bioactive molecule maybe a toxin, radiolabel or antibody, and causes bioactive molecule maybe a toxin, radiolabel or antibody, and causes appropriate molecule maybe a toxin, radiolabel or antibody, and causes appropriate insufficiency, nervous system disorders, kidney disorders, cardiac insufficiency, nervous system disorders, and wound healing. The polynucleotide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for sequences an analysis of individuals with genetic disorders, and in gene therapy.

**Manish of individuals with genetic disorders, and in gene therapy.

**Manish of individuals with human PRO polypeptides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   LPDGTLLLLQPPARGHAHDGQALSTDLGVYTCEASNRLGTAVSRGARLSVAVLREDFQIQ 142

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                         The present invention describes secreted and transmembrane polypeptides and their polymucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AA233891 to AA234338, and AAY41685 to AAY41774 represent polymucleotide and polymeptide sequence given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MGGMAQDSPPQILVHPQDQLFQGPGPARMSCQASGQPPPTIRWLLNGQPLSMVPPDPHHL

```
AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bloactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78877 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 82
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 23 MGGMAQDSPPQILVHPQDQLFQGPGPARMSCRASGQPPPTIRWLLNGQPLSMVPPDPHHL

                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                        The present sequence represents a human protein kinase/protein phosphatase. The polypeptides are expected to participate in signal transduction in cells. The kinase phosphatases are connected with intracellular signalling pathways. Antisense oligonucleotides and compounds identified by screening (agonists or antagonists) can be used to treat human or animal disorders associated with the expression or function of the protein. In addition, the polypeptides may be used target molecules fir drug development.

to the complementary strand of a polymucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polymucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polymucleotide which comprises a 3'-end sequence complementary to a polymucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises a 1 east 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the 5'-end sequence/3'-end sequence is selected from those defined in the bespecification. The primers are useful for synthesising polymucleotides, particularly full-length cDNAs. The primers are also useful for the chefull-length cDNAs. The primers also useful for synthesis encoded by the full-length cDNAs. The primers also wobtaining of the full-length cDNAs as assily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH18732 represent human cDNA sequences; AAB92846 to AAH13632 represent human amino acid sequences; and AAH13622 to AAH13632 tepresent invention.

c the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

The present invention provides the protein and coding sequences of 444 novel human proteins. These were isolated from expressed sequences tags (ESTS). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. Parkinson's disease. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                          Human, antianaemic; vulnerary; antiinflammatory; immunomodulator;
antiinfertility; cerebroprotective; cytostatic; rheumatic; gene therapy;
neuroprotective; antiparkinsonian; protein therapy; EST;

The present invention relates to endothelial cell-specific molecule 4 (ECSM4), and the polynucleotide sequences encoding it. The ECSM4 proteins are useful for imaging vascular endothelium in the body of an individual, and for diagnosing and treating a proliferative disease or condition involving the vascular endothelium (preferably, neovasculature) such as cancer, psoriasis, diabetic retinopathy, atherosclerosis or menorrhagia. The ECSM4 proteins are also useful in the manufacture of diagnosite or prognostic agent for such conditions. The proteins are also useful for detecting endothelial damage or activation, detecting a tumour or tumour neovasculature, cardiac disease, or endometriosis by detecting the amount of ECSM4 present in a sample. The polynucleotide sequences encoding ECSM4 are useful in gene therapy for treating a hypoxic condition such as cancer, cardiac disease, endometriosis or atherosclerosis and in the manufacture of medicaments for treating the above disease. The sequences are useful
                                                                                                                                       240
                                                                                                                                                                              240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel endothelial cell-specific molecule polypeptide 1 or 4, useful for imaging, diagnosing and treating a condition involving vascular endothelium e.g. cancer, cardiac disease, endometriosis, diabetes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                         The invention relates to novel genes (AB092553-AB092607) and proteins (ABP62013-ABP62153) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hamolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       their corresponding polynucleotides are useful for preventing, treating or ameliorating medical conditions, e.g. by procein or gene treating or ameliorating medical conditions, e.g. by procein or gene therapy. Pathological conditions can also be diagnosed by determining the presence of mutations in the new polynucleotides. Specific uses are presence of mutations in the new polynucleotides. Specific uses are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, immune disorders, infection, inflammatory disorders, skin disorders, tumours, atherosclerosis, restenosis, seletal disorders, shindisorders, and disorders, and included injuries, allery, hematopoietic disorders, seletal disorders, neurological disorders, arthritic disorders, asthma, immunodeficiency diseases, arthritic rejection. The polypeptides are also useful for identifying their
